

# MW Campaign on the blazar Markarian 501

## What comes next ?

1 - Convert the reduced data into the data format specified at:

[https://www.slac.stanford.edu/exp/glast/MW/Mrk501\\_2008/PublicHtml/DataFormat.html](https://www.slac.stanford.edu/exp/glast/MW/Mrk501_2008/PublicHtml/DataFormat.html)

*This should be done by the end of this week*

2 – Investigate data correlations and work towards physical interpretation of those results

Naturally, groups will be “formed” by physical proximity... but we all can remain on constant contact

We’ll try organizing another EVO meeting to discuss those issues in about 3 weeks

*Done in 1 -1.5 months from now ?? Let’s try it ....*

3 – Work on single instrument and combined MW publications

*Done by end of November 2008 ?? Let’s try it ...*
