

MAGIC spectrum | ES | 1959

EVO meeting August 12 2009

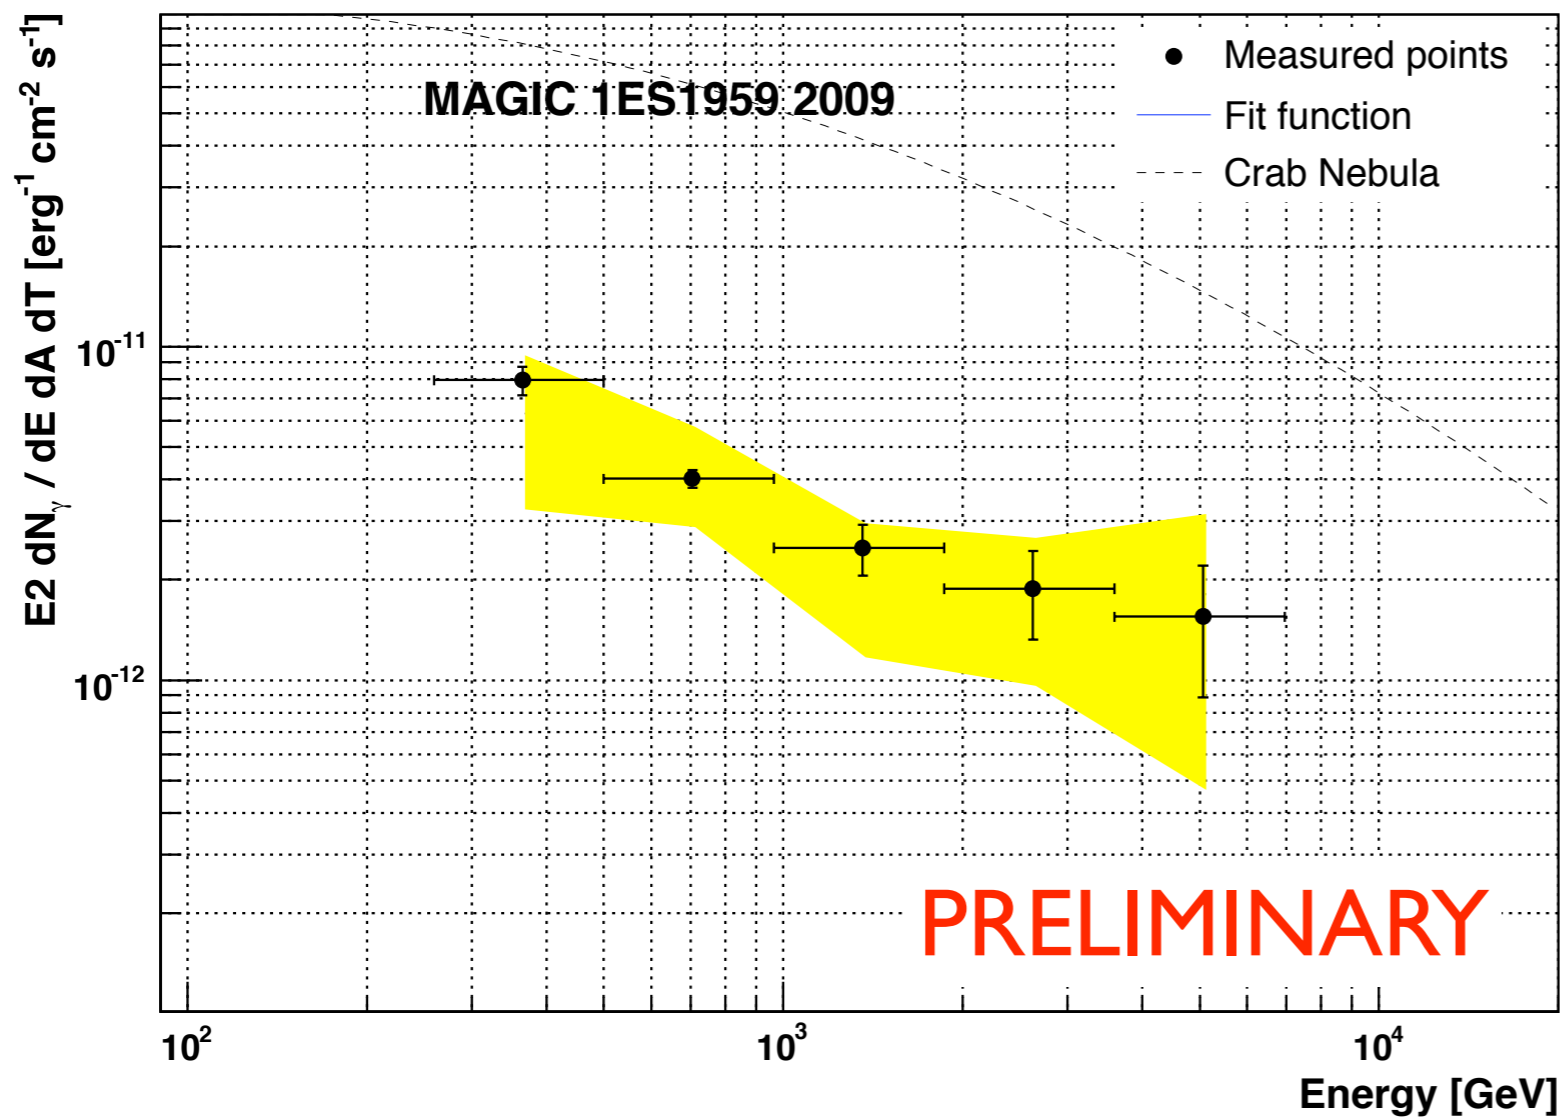

Diego Tescaro <diegot@ifae.es>

- Preliminary analysis
- Moon observations at high ZA
- Good observation data days (after preliminary data selection):
 - May 26
 - June 20 22 23 25 26 27 28 30
 - July 01 04 05 16 17 19 29 30 31
- Total observation time ~10h
- Overall significance: 6.4 sigma
- Less than 10% of Crab flux

lightcurve

spectrum

- MAGIC spectra for the entire campaign
- Very preliminary since analysis has to be at least revised with more suitable MC
- Need to be cross-checked
- Yellow band rough idea of the systematic error
