SED collected so far (Produced yesterday by **Diego Tescaro**)

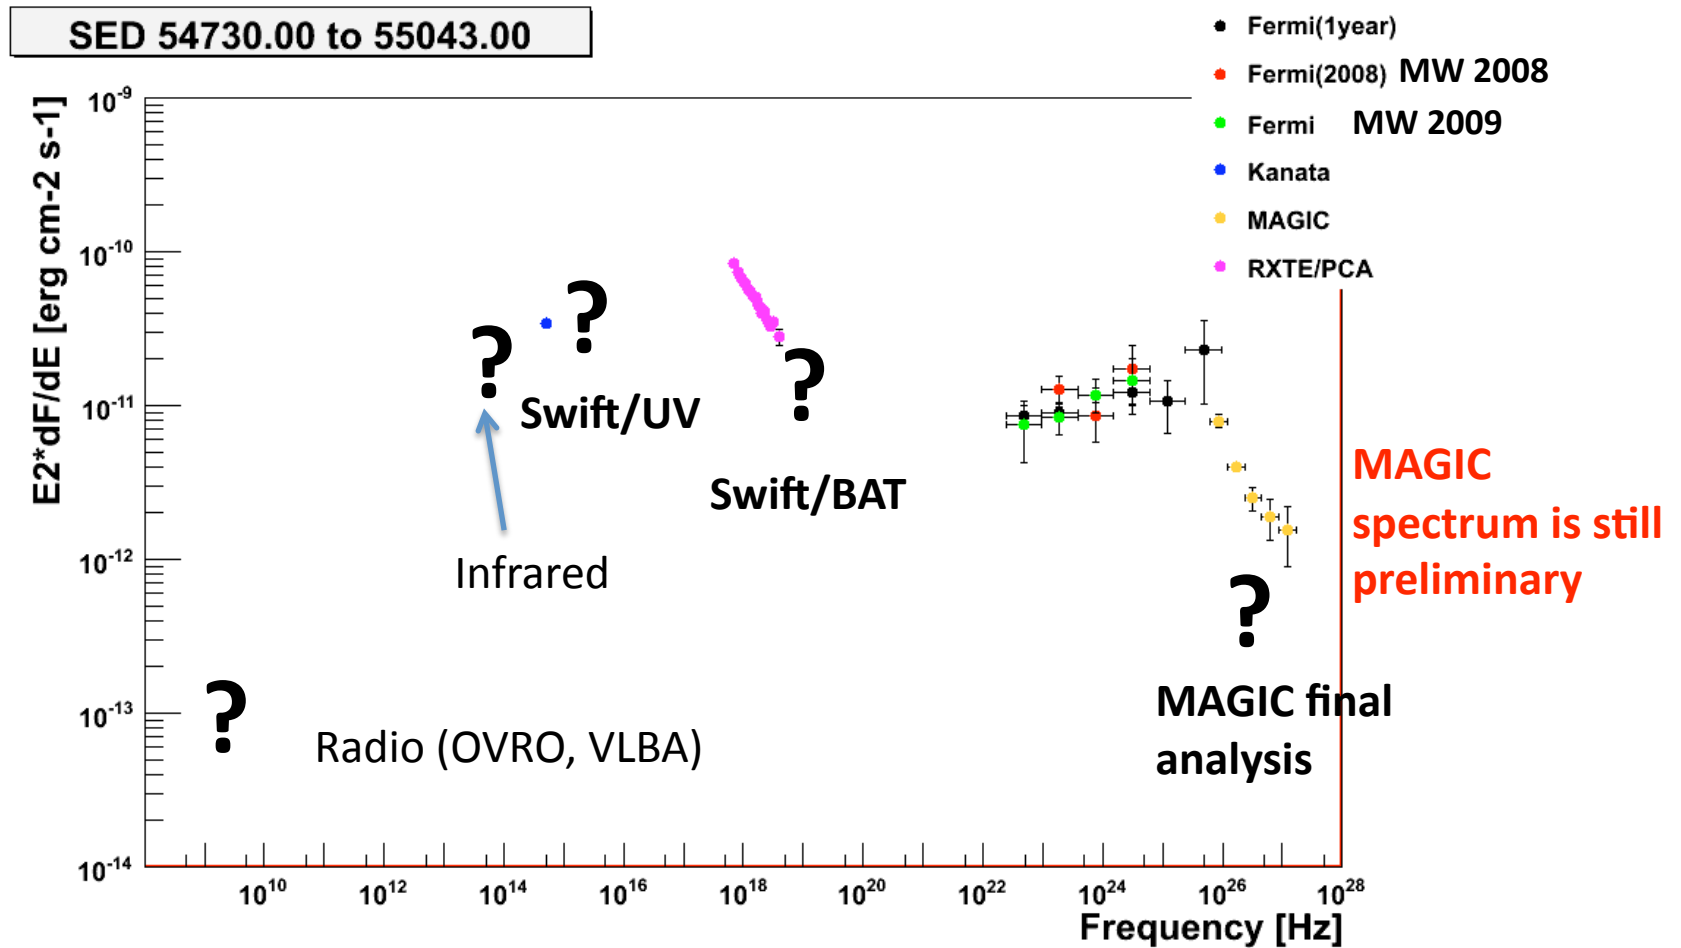

Not all data provided were ingested (!!)

Outlook

What comes next ??

Groups who did not submit the data, they should work towards the reduction and submission ASAP (!!!)

In the mean time we'll deal with:

- Results from 1 year Fermi data

- Multi-frequency variability and cross-correlations

- Modeling of the overall SED (with available MW data)

I hope we can have things more or less done in ~ 1 month.

I'll call for another EVO meeting to discuss results from previous points

I hope we can have the paper ready for submission in about 2 months
