

ECal performance

Sho Uemura

Bad regions

- HV groups with high gain:
 - ▶ Top, $x=2,3$
 - ▶ Top, $x=8,9$
 - ▶ Bottom, $x=10,11$
 - ▶ Bottom, $x=-8,-9$
- FADC in crate 1, slot 3 (top, small positive X) was not triggering

E over P — a first look at gain

- Lots of caveats, but the high-gain groups are visible

Hit energy distributions

- Left plot is of all hits; right is of hits above 150 “MeV”
